

2x4 Chair

by Sander Vieggers

This is an easy to build chair out of common lumber. I designed this chair in 2008 and it was published in Ready Made Magazine. Since then people from all over the world have build their own and made their own variations.

Instructions:

1. Cut the wood and pre-drill the holes
2. Build the left and right side.
3. Add the seat ends and seat middle
4. Create the back
5. Place the back on the chair.
6. Enjoy!
